Primary Examiner, Art Unit 3657							

U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Regarding the lower surfaces without a projection, the applicant arguees that Takanobu discloses multiple projections 30a and thus cannot meet the limitation of the lower surface. The examiner disagrees and likes to point out that the based on the abract of Takanobu which was submitted by the applicant on 10/27/2006, the elements 30a are disclosed as recesses and not projections. Regarding the air retention portions and the air movement passage, the examiner very much understood the invention and it's functionally and states that the reference of Takanobu alone discloses all claimed structures including the air retention portions (see fig. 1, (30c)) and the air passage (fig. 5, (20a)) which are formed on the housing (20) and facing the air retention portions (30c). As disclosed in the last office action, Takanobu discloses the air retentions (30c) which are round through bores, but not are-like through bores as claimed. Takanobu reliants on Sugasawara for such limitations. Sugasawara clearly discloses a damper having a rotor or disc including arc-shaped slits or through bores (6c) which accelerate the flow of viscous liquid (see oot. 11, lines 16-28).

As set forth above the combination of Takanobu and Sugasawara discloses each and every claimed limitations and it is thus the rejections is proper and valid.
